2012 Estimated Number of Persons Living with HIV and AIDS in LAC

Source: LAC Division of HIV and STD Programs, reported as of 12/31/2011.

- (1) Estimate that 21.5% of HIV+ in LA County are unaware of their infection; modified from CDC estimate.
- (2) Of 4,853 notifications pending investigation, estimate half of 2,400 who have detectable VL or confirmatory test to be unduplicated cases.
- (3) Out of the 3,200 cases reported as code, half are thought to represent unduplicated cases.

State of the HIV Epidemic

- 21%¹ of HIV-positive are individuals unaware of their status.
 - 54%² of new infections are attributable to those unaware.
- 33%³ of those aware of their infection are not engaged in care.
 - 40%⁴ of those diagnosed with AIDS had their first positive test result within 1-yr. of their AIDS diagnosis.
 - For those who are linked to care, treatment improves health outcomes

Mortality and HAART Use Over Time

HIV Outpatient Study, CDC, 1994-2003

Testing and Linkage to Care Plus (TLC+)

- TLC+ is a holistic approach to HIV prevention, medical care, and supportive services that aims to...

Testing

Increase proportion of HIV+ individuals aware of their status

Linkage to **C**are

Immediate linkage to HIV care and social services/re-engagement of those fallen out of care

+ Treatment

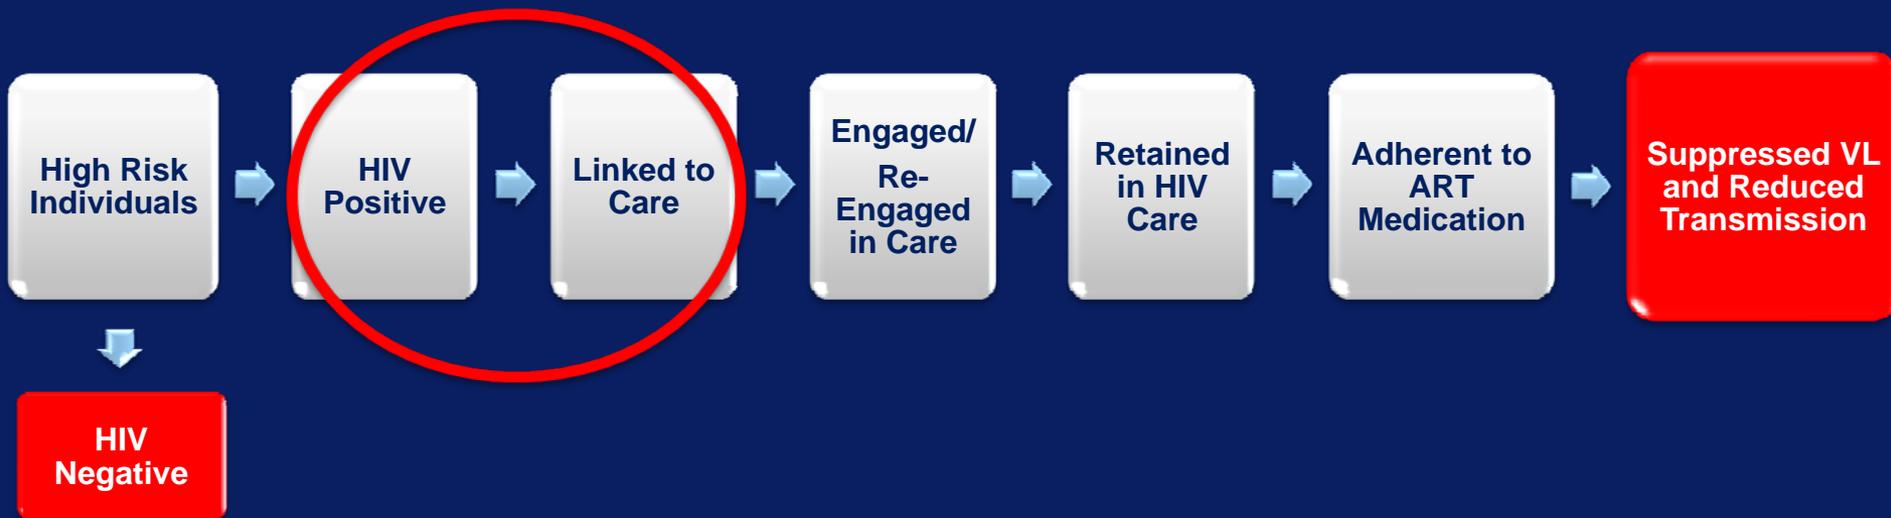

Improve retention in care, access to antiretroviral therapy, and treatment adherence

Los Angeles County Spectrum of Engagement in HIV Care

Objectives

- Who are the approximately 34% of clients who are aware of their status but are unwilling/unable to enter Care?

Goal:

Increase access to care and improve health outcomes for people living with HIV.

Objectives:

Identify factors
of being
unlinked to
care

Inform
targeted
interventions

Hypothesis:

Clients who experience institutional and/or socio-economic challenges to accessing care are more likely to not be in care.

Methodology

- Newly identified HIV Positive Clients (n = 717) identified through DHSP-funded testing facilities from 2006-2008.
- Data Source: HIV Information Resources System (HIRS) with care information collected through HIV/AIDS Reporting System (HARS)
- **Unlinked to care** defined as a client who did not receive a CD4 or Viral Load Test within one year of testing positive for HIV

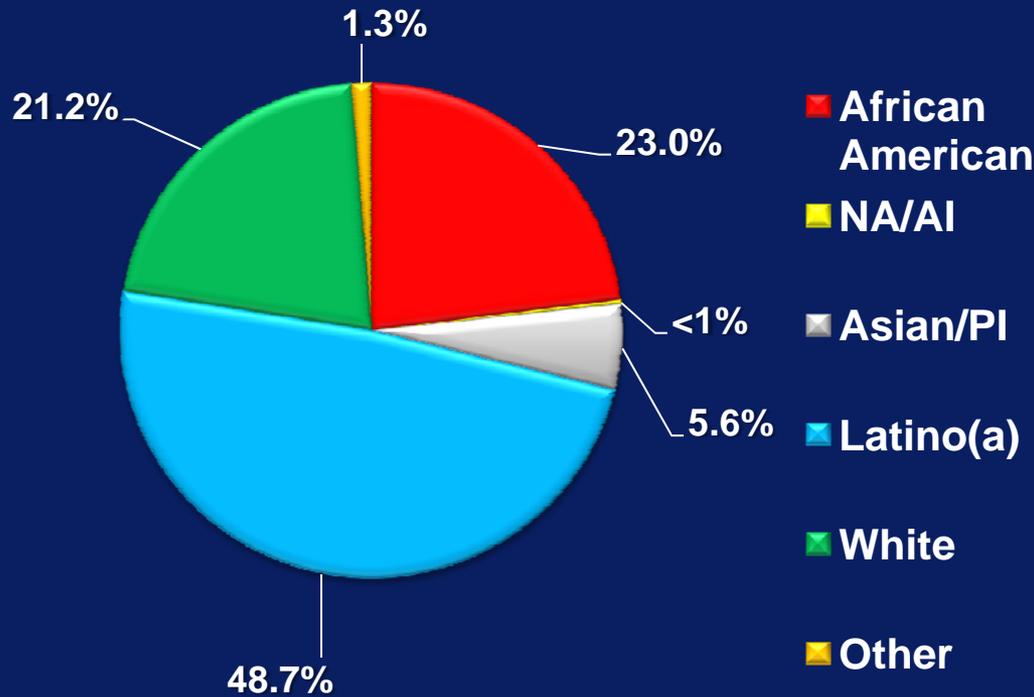

Methodology cont.

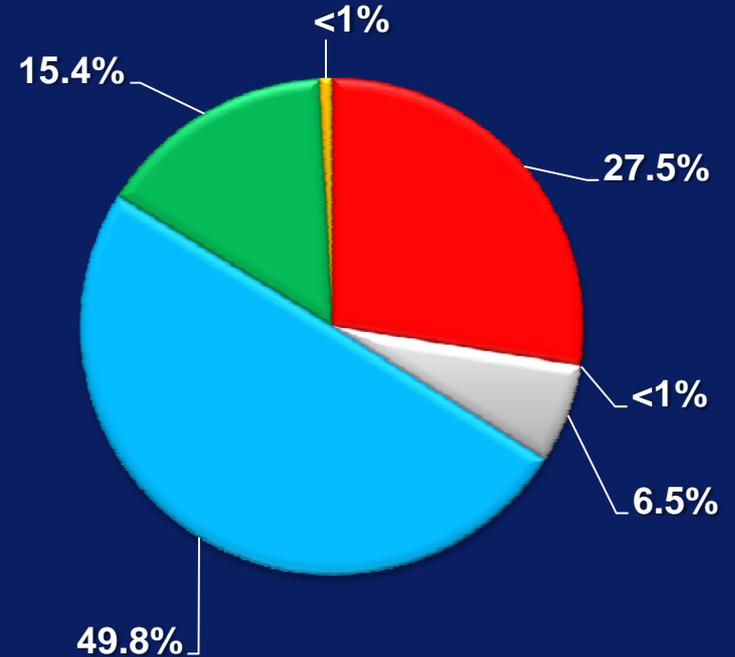

- Conduct Bivariate and Multivariate Logistic Regression Analysis to identify factors associated with being unlinked to care
- Dependent variable: Unlinked to Care
- Independent variables:
 - Demographic information
 - Testing background
 - Risk behaviors

Demographics, Study Sample¹

Overall, n = 717

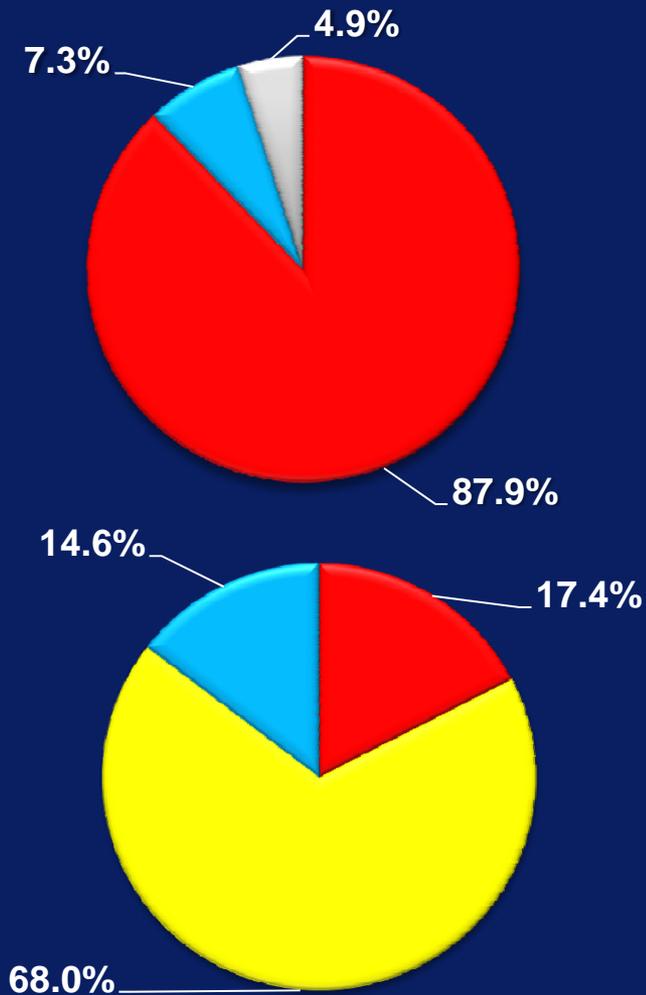

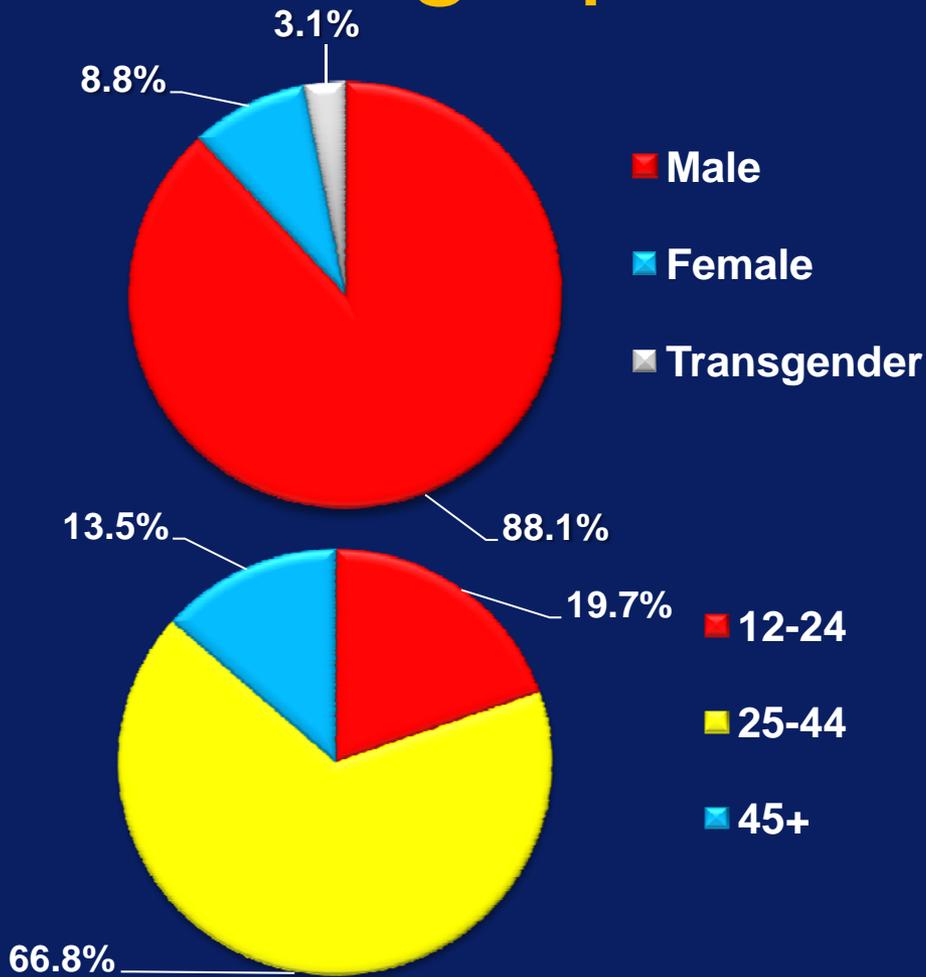

Unlinked, n = 247

¹HIV Information Resources System (HIRS) & HIV/AIDS Reporting System (HARS), 2006-08.

*Represents lab data collected through December 31, 2009

Demographics, Study Sample¹

Overall, n = 717

Unlinked, n = 247

¹HIV Information Resources System (HIRS) & HIV/AIDS Reporting System (HARS), 2006-08.

*Represents lab data collected through December 31, 2009

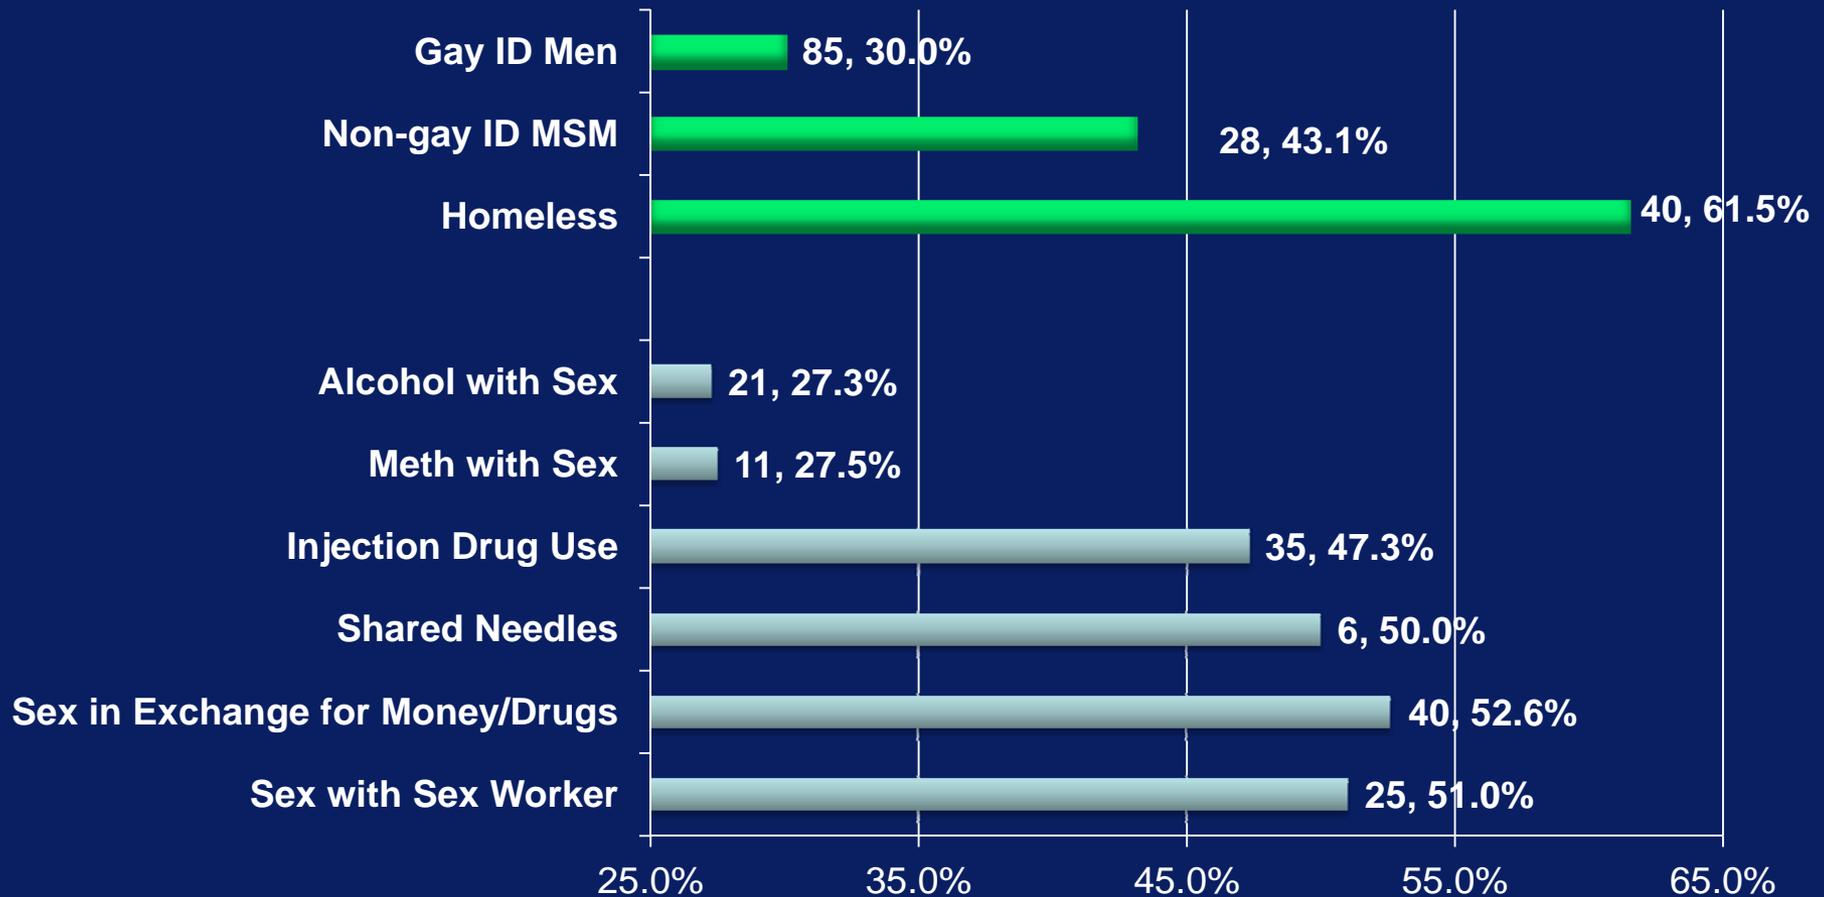

Linkage to Care by Test Year, 2006-08 (n = 717)

Characteristic	No	%
Linked to Care	470	66.0
2006 (n = 252)	150	60.0
Within 3 months	116	46.0
Within 4-6 months	16	6.3
Within 7-12 months	18	4.0
2007 (n = 218)	156	71.6
Within 3 months	132	60.6
Within 4-6 months	16	7.4
Within 7-12 months	8	4.0
2008 (n = 247)	164	66.4
Within 3 months	145	59.0
Within 4-6 months	9	3.6
Within 7-12 months	10	4.0

Unlinked to Care

At Risk Groups and Risk Behaviors

Data Source: HIV Information Resources System (HIRS) and HIV/AIDS Reporting System (HARS), 2006-2008. *Represents lab data collected through December 31, 2009

Unlinked to Care: Multivariate Model

- Multivariate logistic regression (n = 717)
- Dependent variable: Unlinked to Care
- Independent variables:
 - race
 - age
 - gender
 - living situation
 - sexual orientation
 - HIV test type
 - co-location of treatment facility with testing site
 - injection drug use
 - non-injection drug use
 - sex worker
 - sex with sex worker

Demographic Factors Associated with Being Unlinked to Care¹: Multivariate Analysis, (n = 717)

Characteristic	Adjusted OR	95% CI
Race (White = reference)		
African-American	2.49*	1.48 – 4.21
Asian/Pacific-Islander	2.55*	1.18 – 5.51
Latino	1.96*	1.24 – 3.10
Other	0.81	0.16 – 4.09
Age (45+ yrs. = reference)		
12-24 yrs	0.65	0.35 – 1.20
25-44 yrs.	0.95	0.57 – 1.58
Gender (Male = reference)		
Female	0.65	0.31 – 1.36
Transgender	1.70	0.61 – 4.78

¹Time frame from within last 2 years or since last test.

* p-value < 0.05

Data Source: HIV Information Resources System (HIRS) and HIV/AIDS Reporting System (HARS), 2006-2008. Represents lab data collected through December 31, 2009

Demographic Factors Associated with Being Unlinked to Care¹: Multivariate Analysis, (n = 717)

Characteristic	Adjusted OR	95% CI
Sexual Identity (Straight = reference)		
Gay	1.20	0.73 – 1.99
Bisexual	1.18	0.62 – 2.25
Living Situation (Stable = reference)		
Homeless	2.68*	1.44 – 4.99

¹Time frame from within last 2 years or since last test.

* p-value < 0.05

Data Source: HIV Information Resources System (HIRS) and HIV/AIDS Reporting System (HARS), 2006-2008. Represents lab data collected through December 31, 2009

Behavioral Factors Associated with Being Unlinked to Care¹: Multivariate Analysis, (n = 717)

Characteristic	Adjusted OR	95% CI
Illicit Drug Use² (Didn't Use Illicit Drugs = reference)		
Non-injected Drug Use	0.87	0.54 – 1.41
Injected Drug Use	1.16	0.58 – 2.30
Sex Work (Not a Sex Worker = reference)		
Sex Worker	1.31	0.70 – 2.46
Sex with Sex Worker (No Sex with Sex Worker = reference)		
Had Sex w/ a Sex Worker	1.34	0.68 – 2.65

¹Time frame from within last 2 years or since last test.

² Includes crack, cocaine, methamphetamines, heroin

* p-value < 0.05

Data Source: HIV Information Resources System (HIRS) and HIV/AIDS Reporting System (HARS), 2006-2008. Represents lab data collected through December 31, 2009

Testing Factors Associated with Being Unlinked to Care¹: Multivariate Analysis, (n = 717)

Characteristic	Adjusted OR	95% CI
Care Facility at Testing Site (Care Facility = reference)		
No Care Facility at Testing Site	3.16*	2.07 – 4.83
HIV Test Type (Rapid Test = reference)		
Standard	1.24	0.84 – 1.84

¹Time frame from within last 2 years or since last test.

* p-value < 0.05

Data Source: HIV Information Resources System (HIRS) and HIV/AIDS Reporting System (HARS), 2006-2008. Represents lab data collected through December 31, 2009

Summary of Findings

- Overall, 34.5% of those in HIRS/HARS sample were not linked to care
 - Most were male, Latino or African American, and younger: ages (12 – 34)
- Through adjusted analysis, the following were identified as factors of being unlinked to care:
 - African American
 - Latino
 - Asian/PI
 - Homeless
 - Testing Site with no Care Facility

Next Steps

- Increase sample size of analysis in order to increase generalizability
 - Match and analyze full set of most recent data available, 2009-2011.
- Interventions designed to improve timely linkage to care should focus on ethnic minorities, who have unstable housing, who tested at nonmedical testing facilities.
 - Active confirmation of linkage to care by HCT provider, and increased re-imburement for meeting linkage goals
 - Linkage workers, ARTAS Partner Services
